

Estudio Cerámico

Responsible material choices for design-focused ceramic collections

Estudio Cerámico describes an approach based on local raw materials, safe ceramic surfaces and design durability. Project documentation should be checked collection by collection.

LOCAL

raw-material sourcing approach

NO VOCs

during normal service life

SAFE

lead- and asbestos-free statement

WHY THIS MATTERS FOR PROJECTS

- Local raw-material sourcing can reduce transport impacts within the production supply chain.
- Fired ceramic surfaces are inert in normal use and suited to long-life interior applications.
- Durable, cleanable finishes can reduce the frequency of replacement and intensive maintenance.

PROJECT EVIDENCE AND QUALIFICATION

- Request current factory, product and environmental declarations before tender.
- Confirm recycled content, EPD coverage and certification validity for the selected range.
- Do not apply general ceramic-industry claims to a collection without supporting documentation.

Important: Environmental performance, recycled content and certification coverage can vary by collection, format, finish, production site and declaration period. Obtain the current manufacturer documentation for the exact product before relying on a claim.
